

Supplementary Figure 1. Morpholino mediated inhibition of *miR-214*. (A) Injection of zebrafish embryos with synthetic mRNA encoding GFP fused to a 3'UTR containing tandem *miR-214* recognition elements (2X MRE). (B) Co-injection of *miR-214* with the GFP reporter mRNA as in A. (C) Co-injection of 214^{MO} and *miR-214* with the GFP-reporter mRNA. (D) Western blots of embryos as in A-C with antibodies against GFP or α-tubulin.
